

**NOVOHALL
Rotary Sensor
Touchless**

**RFD-4000
Ratiometric**

Special Features

- Fully touchless - no shaft or seals to wear
- Measure directly through any non-ferromagnetic material
- Electrical range up to 360°
- Linearity $\pm 0.5\%$
- Simple mounting
- Lateral magnet offset up to ± 3 mm
- Protection class IP67, IP68, IP69
- One and multi-channel versions
- Unlimited mechanical lifetime
- High resolution to 12 bit
- Excellent price/performance ratio
- Extremely flat 7 mm design

Applications

- Manufacturing Engineering (textile machinery, packaging machinery, sheet metal and wire machinery)
- Medical Engineering
- Mobile working machines (industrial trucks, construction machinery, agricultural and forestry machinery)
- Marine applications

The RFD-4000 utilizes a separate magnet or magnetic position marker, attached to the rotating shaft to be measured. The orientation of the magnetic field is measured and an analog voltage representing the angle is the output signal.

The very compact physical dimensions allows installation in small spaces. The housing is made of high grade temperature-resistant plastic material. The sensor is sealed and is not sensitive to dust, dirt, or moisture.

The two-part design, with the RFD sensor itself, and its magnetic position marker, offers great flexibility when mounting. The absence of shaft and bearing makes the assembly much less sensitive to axial and radial application tolerances. Measurements can be made transmissively through any nonferromagnetic material.

Electrical connection is made via lead wires.

Description

Material	Housing: high grade, temperature resistant plastic PBT GF with brass inserts
Mounting	With 2 pan head screws M4x14 (included in delivery)
Fastening torque of mounting	max. 150 Ncm
Electrical connection	Lead wires 0.5 mm ² (AWG 20), PVC

Mechanical Data

Dimensions	See dimension drawing
Mechanical travel	continuous
Weight	approx. 10 g

Lateral Magnet Offset

Lateral magnet offset will cause additional linearity error. The angle error, which is caused by radial displacement of sensor and position marker depends on the used position marker or magnet.
